

# Community Feedback at Opaheke School

## HEALTH AND PE CURRICULUM

### Consultation with Parents, Caregivers and the Community

Every two years the school informs the parents, caregivers and community about health education components of the curriculum.

The school consults with the school community regarding the way in which the school should implement health education. This will help to strengthen health education and assist with the development and review of related policies and programmes.

The Curriculum:

In Health and Physical Education, the focus is on the well-being of students themselves, of other people and of society through learning in health related and movement contexts.

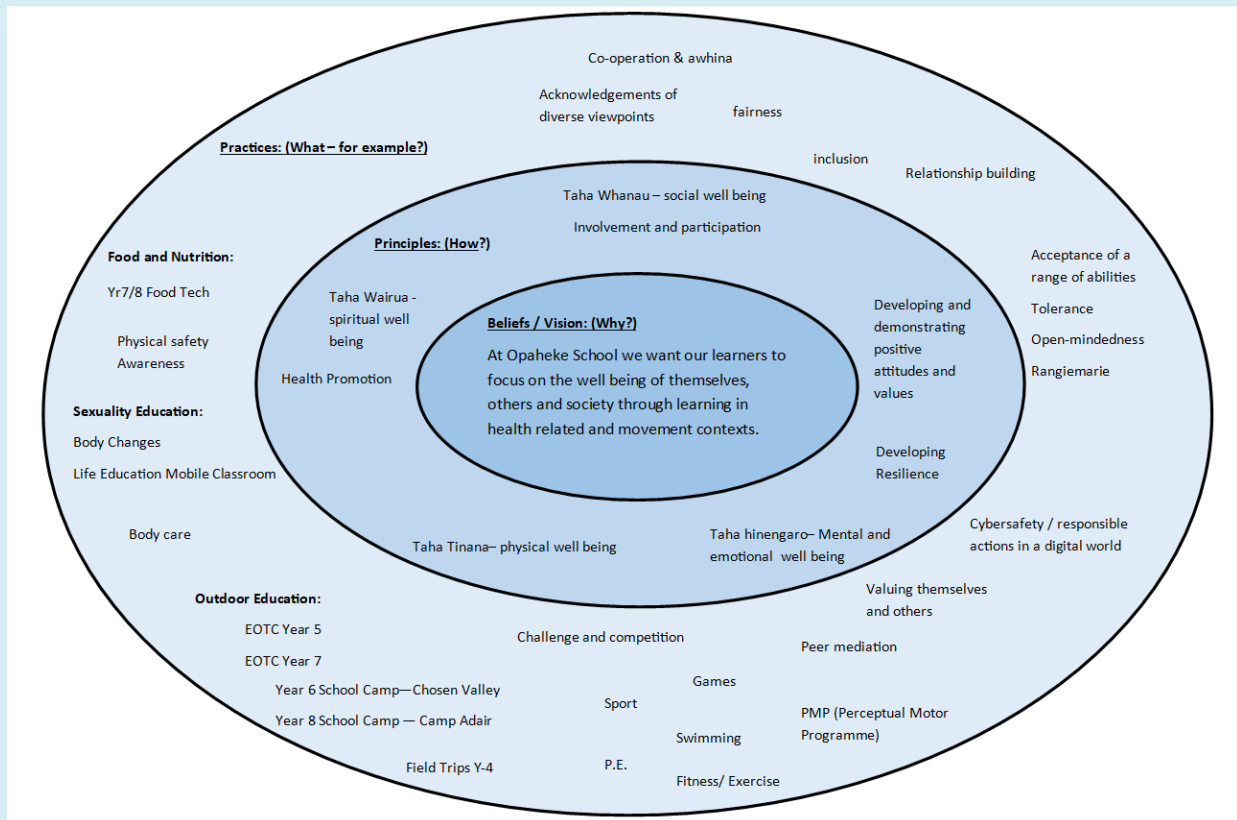

The seven key areas of learning are

- Mental health
- Sexuality education
- Food and nutrition
- Body care and physical safety
- Physical activity
- Sports studies
- Outdoor education

Further information including the Achievement Objectives at each level can be viewed online <https://nzcurriculum.tki.org.nz/The-New-Zealand-Curriculum/Health-and-physical-education>

Below is the proposed programme for Health and PE over the next two years.

This is the draft BPP (Beliefs, Principles and Practices) or Why, How and What for the Health and PE Curriculum at Opaheke School.

We will be sending out a survey early in Term 4 to get your feedback on the proposed Health and PE programme and what aspects you would like to see added, removed or changed.

Your feedback will then inform the Health and PE Team on the final programme over the next two years (2021, 2022).

We will then publish the finished programme prior to the end of the year.
